EDUCATION

Astana IT University (AITU)

B.Sc. in Software Engineering, GPA: 3.1 / 4.0

2023 – 2026

Kazakhstan

TECHNICAL SKILLS

- Languages: Go, Java
- Backend: RESTful API design, gRPC, Microservices
- Frameworks: Gin, Gorilla Mux, Spring Boot
- Frontend: React
- Databases: PostgreSQL, MongoDB
- Tools: Git, Docker, Linux
- Testing: Testify

EXPERIENCE

Software Engineer

StellarByte

Jul 2024 – Oct 2024

Kazakhstan

- Built and maintained Go microservices, improving API reliability.
- Developed REST and gRPC services using Gorilla Mux and Protobuf.
- Implemented a React admin dashboard with TypeScript.
- Wrote unit and integration tests, reducing production issues.
- Participated in architecture discussions and code reviews.

IT Infrastructure Specialist

KEGOC

Dec 2024 – Jun 2025

Kazakhstan

- Configured and monitored Linux and Windows servers.
- Maintained backups, RAID arrays, and server uptime.
- Assisted in migration and upgrade of internal server software.
- Ensured infrastructure stability and availability.

Web Development Teacher

Cap Education

Feb 2024 – Jun 2024

Kazakhstan

- Conducted group programming lessons.
- Assisted students with web development projects.
- Managed CRM and student performance tracking.

PROJECTS

YurtMart — Microservices E-commerce Platform 🌐

- Designed and developed a scalable microservices-based e-commerce backend in Go.
- Implemented multiple independent services: API Gateway, User Service, Product Service, Order Service, Payment Service, Shopping Cart, Review, and Order History.
- Used gRPC, REST, and NATS for both synchronous and asynchronous inter-service communication.
- Designed database schemas using MongoDB for each service (database-per-service pattern).
- Containerized all services using Docker and orchestrated them with Docker Compose.
- Implemented centralized API Gateway for routing and request handling.
- Configured monitoring components (Prometheus) and logging mechanisms.
- Applied microservices and clean architecture principles to ensure scalability and maintainability.

E-commerce Backend API (Monolith) 🌐

- Developed a backend REST API for an e-commerce platform using Go.
- Implemented core business logic including user management, product catalog, and order processing.
- Designed and structured the project using layered architecture (handlers, services, repositories).
- Built RESTful endpoints for CRUD operations and client-server communication.
- Integrated PostgreSQL for data persistence and implemented database models and queries.
- Handled request validation, error handling, and API response structuring.
- Used Gorilla Mux for routing and HTTP request handling.
